

TOOTHBRUSH ASSEMBLY WITH RAPIDLY DEPLOYABLE BRUSH HEAD MEMBER

Abstract

A toothbrush assembly with a rapidly deployable brush head member that mimics the operation of a switchblade knife. The toothbrush assembly includes a handle structure, a brush head member having a brush head end and a pivot end in pivotal connection with the handle structure, and a brush head switch lock and spring assembly connected between the handle structure and the brush head member. The spring assembly biases the brush head member and the switch lock controls operation of the toothbrush assembly.
